'ERIN BROCKOVICH' CARCINOGEN IN TAP WATER OF MORE THAN 200 MILLION AMERICANS

*"It's INEXCUSABLE that the government has done so little to protect us from this chemical that has been shown to cause cancer at even insanely low levels."
- Erin Brockovich*

UPDATE: With the release of EWG's Tap Water Database, we found an additional **32 million Americans** who have been supplied water with chromium-6 contamination.

In the film "**Erin Brockovich**," the environmental crusader confronts the lawyer of a power company that polluted the tap water of Hinkley, Calif., with a

carcinogenic chemical called chromium-6. When the lawyer picks up a glass of water, Brockovich says: "We had that water brought in 'specially for you folks. Came from a well in Hinkley.'"

The lawyer sets down the glass and says, "**I think this meeting's over.**"

But almost 25 years after that real-life confrontation,^[1] the conflict over chromium-6 is not over. A new EWG analysis of federal data from nationwide drinking water tests shows that the compound contaminates water supplies for more than 200 million Americans in all 50 states. Yet federal regulations are stalled by a chemical industry challenge that could mean no national regulation of a chemical state scientists in California and elsewhere say causes cancer when ingested at even extraordinarily low levels.

200+ 
MILLION AMERICANS IN ALL 50 STATES HAVE CONTAMINATED WATER

The standoff is the latest round in a tug-of-war between scientists and advocates who want regulations based strictly on the chemical's health hazards and industry, political and economic interests who want more relaxed rules based on the cost and feasibility of cleanup. If the industry challenge prevails, it will also extend the Environmental Protection Agency's record, since the 1996 landmark amendments to the Safe Drinking Water Act, of failing to use its authority to set a national tap water safety standard for any previously unregulated chemical.^[2]

In 2008, a two-year study by the National Toxicology Program found that drinking water with chromium-6, or hexavalent chromium, caused cancer in laboratory rats and mice.^[3] Based on this and other animal studies, in 2010, scientists at the respected and influential California Office of Environmental Health Hazard Assessment concluded that ingestion of tiny amounts of chromium-6 can cause cancer in people, a conclusion affirmed by state scientists in New Jersey and North Carolina.

The California scientists set a so-called public health goal of 0.02 parts per billion in tap water, the level that would pose negligible risk over a lifetime of consumption.^[4] (A part per billion is about a drop of water in an Olympic-size swimming pool.) But in 2014, after aggressive lobbying by industry and water utilities, state regulators adopted a legal limit 500 times the public health goal.^[5] It is the only enforceable drinking water standard at either the state or federal level.

PROVIDERS COMMENTS:

There's so much more information provided in the original article. My goal was to provide you a glimpse of what's happening throughout the U.S.' municipal water systems, which means that it's also happening in your city too!

Don't be fooled. Consuming harmful chemicals through drinking water will and has cause multiple health problems for more than 200+ million Americans. You too probably are experiencing health problems that could possibly be linked to the water that you've been drinking for years.

No one within the government sector has taken the time to consistently warn "we the people" about the dangers of drinking unhealthy, chemically laced water. But guess what... there are people, like myself, sharing information with our family members and neighbors about the dangers of drinking tap, bottle, filtered and other forms of so-called healthy water when in fact, these forms of water have been scientifically shown to be unhealthy to drink.

Did you know that our bodies need four things to stay alive and function properly? They are - air, water, food, and minerals.

We know we need air, water, and food to exist but what significant role does minerals play in helping to keep us alive and functioning properly?

All living creatures upon death, will decompose back into the earth, thus all living things are made from and composed of dirt.

Every mineral that's inside of dirt is part of our physical makeup. In fact, it's been shown that the human body is composed of more than 120 minerals. And where are our minerals found? In soil, in the ocean floor, and in certain plants.

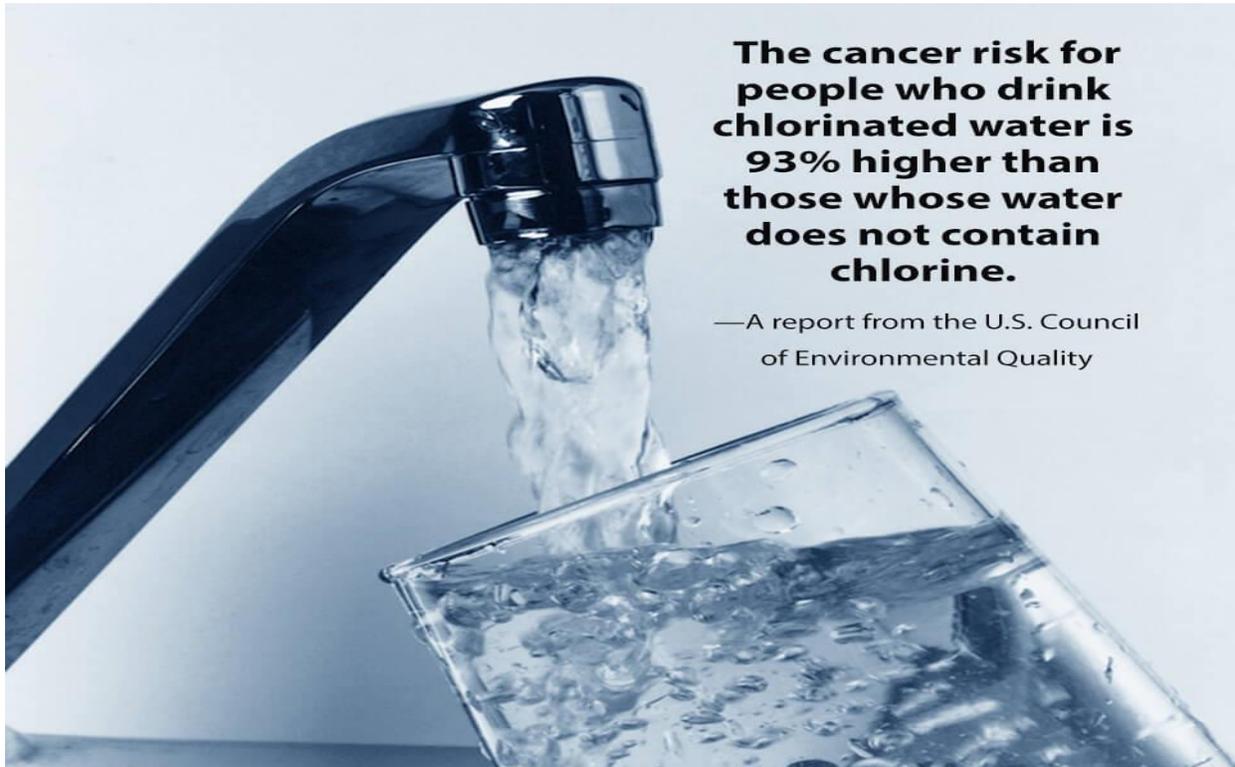

So why haven't you heard of this before now? Our government is not concerned with educating the masses on important preventive issues that relate to their citizens being healthy.

But let's not get side-tracked. Did you know that the primary chemical being used to clean our drinking water is chlorine? And that this chemical is also known to be a carcinogenic substance? (See picture on next page)

What do you think happens after years of ingesting small amounts of this chemical into your body? Overtime, gradually chlorine will slowly destroy healthy tissue, your cells, which will gradually develop into numerous health problems. Health problems that require the use of pharmaceuticals that will also have a negative effect on your body due to the interaction of the chlorine and prescribed drug.

Who knew that the risk for people who drink chlorinated water is 93% higher...

Have you ever wondered where bottled water companies get their water? If they are paying a water bill then they're using water from their municipal water system.

So, how does one fix this problem? Is there a natural solution to making unhealthy drinking water healthy? Yes, there is a natural solution to "purifying" your drinking water. It's called Xtreme X2O. X2O is a marine mineral that's harvested from depths of 200 feet from the oceans in Okinawa Japan.

The minerals in X2O will make tap, bottled, distilled, and filtered water become "alive". I refer to this form of healthy water as "Living water"! X2O living water is water that is free from chemical contaminants, has a high alkalinity of 8+, and an abundance of 80+ minerals, not just a combination of a few major and trace minerals.

Our earth produces "living water" deep within the earth's aqua sphere. These are the pockets of water that exist underground where fresh water from streams are able to enter and exit. These pockets of fresh water are naturally alkaline and have a high concentration of minerals, not just one or two. But since we are no longer an agricultural society, we have access to chemically treated municipal water that is pumped into our homes for use.

We must never forget that our bodies are designed to perform specific functions and minerals play a key role in our cellular metabolic processes.

Our 100+ trillion cells require a high consistent daily supply of these minerals to aid in nourishing each cell's central operation hub, the mitochondria. Other parts of the cell are also dependent upon these

minerals and their transport vehicle – water to remove waste and toxins from within each cell throughout our entire body.

For more than 20 years XOOMA World-Wide has provided Xtreme X2O, as the ONLY marine mineral complex capable of neutralizing the primary cleaning element in our drinking water - CHLORINE! This would include neutralizing chlorine in multiple types of water: tap, different brands of bottle water, distilled water, purified bottled water, and in-home filtration systems directly connected to your local municipal water system.

Bottle water companies reprocess municipal water and unsafe plastic bottles to produce various brands of water that is sold as healthy water. Even bottle water companies have the option of adding a few electrolytes or a few minerals to their water and advertise their water as healthy and safe to drink when in fact, these forms of water also lack the volume of minerals your cells require to become hydrated.

It has been scientifically proven that an adult should drink at least half of his/her body weight in purified mineral rich water that has a naturally high alkalinity to keep their body, all 100+ trillion cells hydrated each day. That's a lot of water to be drinking but the source of all diseases based on Dr. Linus Pauling, 2Xs Nobel Prize Winner indicated that, "every disease and illness can be traced to a mineral deficiency".

Adding X2O to your drinking water improves your overall health when you begin to drink at least 80 to 100 oz. of "living water". Cellular detoxification will improve thus helping to remove harmful toxins, food preservatives and other unhealthy waste products from your body.

If you're interested in improving your health and learning more about the benefits of adding X2O to your daily wellness regimen, take a few minutes to review my XOOMA website: www.XOOMA.com/OHW.

Additional health information on mineralization, how plastic bottles harm our health, etc... can be provided upon request by sending an email to pemfhelpsme@gmail.com.
